PROFILE

Accomplished Software Engineer with a total of 6 years in software development, including nearly 4 years of solid corporate experience within the e-commerce, logistics, B2B, B2C and finance sectors. Possesses a proven track record of developing robust web and mobile applications alongside complex API integrations. Currently advancing my technical expertise through an MSc in Applied Artificial Intelligence in London. Focused on bridging the gap between traditional software development and AI-powered solutions. Proven track record of managing complex projects, ensuring seamless system integrations, and delivering high-performance solutions. Adept at collaborating within cross-functional environments, with a strong drive to leverage cutting-edge technologies for solving complex real-world problems.

EDUCATION

University of Greenwich, MSc Applied Artificial Intelligence for Engineering — 2025 - Oct 2026

Focus: Developing advanced AI models and deep learning applications for engineering challenges.

Istanbul Aydin University, Bachelor's Degree in Software Engineering — 2017 - 2021

Altinbas University, Associate degree in Computer Programming — 2015 - 2017

Anadolu University, Bachelor's Degree in Business Administration (Distance Learning) — 2014 – 2018

CERTIFICATION

CEH (3 months) — Sep 2018
MICROSOFT SOFTWARE SPECIALIZATION (6 months) — Sep 2017
ANDROID APPLICATION DEVELOPMENT (3 months) — Jan 2017

WORK EXPERIENCE

Senior Application Development Specialist — Jun 2024 - May 2025
BDH Bilisim Destek Hizmetleri (ICT Services) | Istanbul, Turkey

- Developed and optimized enterprise-level .NET applications, implementing asynchronous programming to ensure systems remain responsive under heavy load, improving overall application throughput by an estimated 20%.
- Optimized MSSQL databases by writing efficient Stored Procedures and resolving data-loading bottlenecks, resulting in up to a 30% reduction in query execution and page load times.
- Built and maintained secure RESTful APIs to handle high-volume daily operations. Used memory caching to reduce server load and deliver faster response times.
- Enhanced existing Hangfire and RabbitMQ implementations for reliable background task management, ensuring the main application runs smoothly without interruptions.
- Utilized Azure DevOps (Git and Boards) for version control and Agile task tracking. Actively participated in Pull Request reviews to ensure code quality before manual IIS production deployments.

Recent Project: Sahibinden.com Integration — Led the initial architectural design and set up API integrations for a system aimed at automating offer and purchase workflows.

Software Engineer — Oct 2023 - Mar 2024
Genex Software | Istanbul, Turkey

- Actively contributed to the full software development life cycle (analysis, design, and implementation) for scalable Angular application and a .NET backend (WCF service).

- Supported backend data operations by making necessary adjustments and data verifications using Oracle (PL/SQL) to ensure accurate data flow.
- Ensured cross-system compatibility, managing reliable real-time data transfer between backend services and the user interface.

Recent Project: Live Stock Market Application — Implemented real-time data streaming using TypeScript, Node.js and WebSockets (Socket.IO) to power live dashboards for stock and fund trading.

Software and Database Specialist Jun 2022 - Sept 2023
Cargomda Logistics & Software | Istanbul, Turkey

- Designed and built software infrastructure and web applications using .NET Core, integrating a Python (Django) API for AI-driven document processing.
- Developed a cross-platform Flutter mobile application for the logistics team, enabling real-time barcode scanning and streamlining daily cargo tracking operations.
- Managed core operational modules (Finance, Accounting, and User Management) within a centralized .NET 5 architecture, utilizing RESTful APIs primarily such as external cargo location tracking.
- Led the company's first marketplace API integration using .NET 6, establishing a secure, automated data pipeline with Etsy to instantly fetch purchase details and auto-generate shipping records.

Mobile Software Specialist Mar 2022 - Jun 2022
Mebitech Bilisim (IT Services) | Istanbul, Turkey

- Developed a cross-platform mobile application using Flutter for brokerage firms, enabling users to securely execute stock and fund trading operations.
- Built internal Flutter services to consume .NET-based RESTful APIs, efficiently parsing and displaying complex financial market data on the mobile interface.

Software Support Specialist Aug 2021 - Feb 2022
Beyond Bilisim (IT Services) | Istanbul, Turkey

- Provided technical support and contributed to web development, maintenance, and optimization.
- Managed marketplace operations and integrated new modules into e-commerce platforms.

PRIOR INTERNSHIP EXPERIENCE

Software Development Intern | Fatih Municipality Jun - Aug 2020

GIS Software Development Intern | Istanbul Metropolitan Municipality (IBB) Jun - Aug 2019

Software Department Intern | Index Computer Jun - July 2017

Technical Intern | Ogan Computer Jun - July 2016

TECHNICAL SKILLS

- **Frameworks & Technologies:** .NET Core / .NET 5, Entity Framework, WCF, ADO.NET, RabbitMQ, Hangfire
- **Programming & Scripting:** C#, Python, Dart (Flutter), JavaScript, TypeScript, HTML, CSS
- **Database Management:** Microsoft SQL Server, PostgreSQL, MySQL, Oracle, MongoDB (NoSQL), Firebase
- **IDEs & Tools:** Azure DevOps, Git, Bitbucket, Jira, IIS, Docker, Visual Studio, VS Code, Android Studio
- **Languages:** English (B2 - Upper Intermediate), Turkish (Native)

INTERESTS

- **Artificial Intelligence & Research:** AI-Enabled Analysis, Large Language Models (LLMs), RAG Architectures, Modelling of Human Gait Dynamics, and Machine Sensing.
- **Cloud Computing:** Exploring AWS and Azure cloud infrastructures and modern CI/CD pipelines.
- **Sustainable Technology:** Researching supply chain applications in smart manufacturing.
